Part 03.0
Linear Issue WAL-15

Remediation Reconstruction

Project	NexusOS — AI Business Operating System
Part	Part 03.0
Linear issue	WAL-15
Report title	Remediation Reconstruction
Generated	2026-07-19
Purpose	Standalone Linear attachment (manual upload)
Source report(s)	docs/reports/Part-03.0/Part-03.0-Remediation-Reconstruction.md

This PDF is a presentation export of repository engineering report content. Source report files in the repository were not modified.

Evidence Statement

This report is a retrospective engineering reconstruction produced after implementation. Its contents are derived exclusively from repository evidence. It is not a contemporaneous engineering document. No engineering events are fabricated. Where repository evidence is unavailable, that limitation is explicitly documented.

Table of Contents

Part 03.0 — Remediation Reconstruction
- Evidence Statement
- Objective (as recorded in Linear)
- What repository evidence can support
- What repository evidence cannot support
- Honest reconstruction conclusion
- Evidence limitations (shared)

Report Content

Content below is copied from the source repository report(s) without alteration.

Part 03.0 — Remediation Reconstruction

Linear: WAL-15 **Reconstruction date:** 2026-07-19 **Nature:** Reconstruction only — **not** a contemporaneous remediation log

Evidence Statement

This report is a retrospective engineering reconstruction produced after implementation.

Its contents are derived exclusively from repository evidence.

It is not a contemporaneous engineering document.

No engineering events are fabricated.

Where repository evidence is unavailable, that limitation is explicitly documented.

Objective (as recorded in Linear)

Resolve findings from the Part 03.0 engineering review so the package could close.

What repository evidence can support

- **Linear workflow**

WAL-15 is Done after WAL-14 and before WAL-16/WAL-17 — consistent with a remediation gate.

- **Durable post-03.0 baseline**

The enterprise schema state attributable to Part 03.0 remains commit `838db64` + revision `0a961c2ea2cf` + `database.md` + original isolation tests. There is **no** git commit uniquely labeled as "WAL-15 remediation."

- **What must not be reassigned to Part 03.0**

The following are **Part 03.1** remediations with explicit commits/reports — not Part 03.0 silent fixes: *Composite cross-tenant FKs (*`217e90d00cc0`*)* Soft-delete-safe unique indexes (`217e90d00cc0`) *Missing* `created_by`/`updated_by` *FK drift (*`3a2aec52f6d2`*)* Request-boundary / authz / audit / rate-limit hardening (`f521d38`)

What repository evidence cannot support

- No list of Part 03.0 review findings that were remediated
- No before/after diffs uniquely attributed to WAL-15
- No contemporaneous remediation report with validation commands

Honest reconstruction conclusion

WAL-15 records that the Linear remediation phase completed for Part 03.0 closeout. The repository does not preserve finding-level remediation detail for that phase. Residual structural integrity work was later executed and documented under Part 03.1.

Evidence limitations (shared)

- Part 03.0 code primarily landed in git commit `838db64` (2026-07-09) under the commit message "chore: validate and stabilize backend foundation", bundled with broader foundation scaffolding. There is no separate contemporaneous commit uniquely titled "Part 03.0".
- Linear issues WAL-7…WAL-17 were created on 2026-07-18 as a historical execution hierarchy after the schema already existed in the repository.

• No contemporaneous Part-03.0 independent-review finding IDs, meeting notes, or signed review PDF exist in the repository (unlike Part 03.1's report pack).

• Structural integrity remediations (composite cross-tenant FKs, soft-delete-safe unique indexes, missing `created_by`/`updated_by` FKs) are **Part 03.1** evidence (`f521d38`, revisions `3a2aec52f6d2` / `217e90d00cc0`) and are not attributed as silent Part 03.0 remediations.
