NexusOS
AI Business Operating System

Part 03.0
Linear Issue WAL-16

Documentation

Project	NexusOS — AI Business Operating System
Part	Part 03.0
Linear issue	WAL-16
Report title	Documentation
Generated	2026-07-19
Purpose	Standalone Linear attachment (manual upload)
Source report(s)	docs/reports/Part-03.0/Part-03.0-Documentation.md

This PDF is a presentation export of repository engineering report content. Source report files in the repository were not modified.

Evidence Statement

This report is a retrospective engineering reconstruction produced after implementation. Its contents are derived exclusively from repository evidence. It is not a contemporaneous engineering document. No engineering events are fabricated. Where repository evidence is unavailable, that limitation is explicitly documented.

Table of Contents

Part 03.0 — Documentation
- Evidence Statement
- Objective
- What was delivered
  - Canonical product document
  - Document contents (evidence)
  - Non-governing archive
- Repository evidence
- Outcome
- Evidence limitations (shared)

Report Content

Content below is copied from the source repository report(s) without alteration.

Part 03.0 — Documentation

Linear: WAL-16 **Reconstruction date:** 2026-07-19

Evidence Statement

This report is a retrospective engineering reconstruction produced after implementation.

Its contents are derived exclusively from repository evidence.

It is not a contemporaneous engineering document.

No engineering events are fabricated.

Where repository evidence is unavailable, that limitation is explicitly documented.

Objective

Produce and preserve documentation so architecture, constraints, RBAC, and tenant-isolation guarantees remain discoverable.

What was delivered

Canonical product document

Current path: `docs/product/database.md` **Original path at landing:** `docs/database.md` (created in `838db64`) **Relocation:** documentation reorganization commit `db3cb86` (2026-07-13) moved product docs under `docs/product/` while preserving history.

Document contents (evidence)

- Global standards (UUID v7, company_id, soft-delete/append-only, enums, money, naming)
- ON DELETE policy table
- Per-tenant uniqueness rules
- Composite index strategy
- RBAC model (53 seeded permissions)
- Mermaid entity map
- Verified isolation guarantees
- Operator commands (`make revision`, `make migrate`, seed)

Non-governing archive

Earlier brainstorming roadmaps under `docs/archive/` (relocated from original `docs/` during reorg) are explicitly non-governing relative to `docs/product/`.

Repository evidence

- `docs/product/database.md`
- `git show 838db64:ai-business-os/docs/database.md`
- `db3cb86` docs reorg
- This report pack under `docs/reports/Part-03.0/` (added 2026-07-19 as retrospective evidence)

Outcome

Part 03.0 is explainable from product documentation without reverse-engineering every model file. This retrospective report pack supplements `database.md` with phase-aligned engineering reconstructions.

Evidence limitations (shared)

- Part 03.0 code primarily landed in git commit `838db64` (2026-07-09) under the commit message “chore: validate and stabilize backend foundation”, bundled with broader foundation scaffolding. There is no separate contemporaneous commit uniquely titled “Part 03.0”.
- Linear issues WAL-7…WAL-17 were created on 2026-07-18 as a historical execution hierarchy after the schema already existed in the repository.
- No contemporaneous Part-03.0 independent-review finding IDs, meeting notes, or signed review PDF exist in the repository (unlike Part 03.1’s report pack).
- Structural integrity remediations (composite cross-tenant FKs, soft-delete-safe unique indexes, missing `created_by`/`updated_by` FKs) are **Part 03.1** evidence (`f521d38`, revisions `3a2aec52f6d2` / `217e90d00cc0`) and are not attributed as silent Part 03.0 remediations.
